If those taken from animals are called zoomorphs, and those from plants phyllo-morphs, it will be convenient to call those derived from structure, skeuomorphs. *Ibid.*, As soon as man began to make things, to fasten a handle to a stone implement, to construct a wattled roof, to weave a mat, skeuomorphs became an inseparable part of his existence. *Ibid.* 168 The transfer of thought-work from the flint axe, where it was functional, to the bronze cell, where it was skeuomorphic. 1905 [see **ANTHROPOMORPHIC a. 2*].

GARDEN *Steel & Iron* 142 Under these circumstances the obstruction at a certain point frequently suddenly gives way, and descends with considerable force to the hearth, constituting what is known as a 'slip'. 1888 LOCKWOOD *Dict. Mech. Engin.*, *Slip*, the sliding of riveted joints one over the other to such an extent as to be visible. 1900 A. C. HARMSWORTH *Motors & Motor-Driving* vi. 95 On the road also, if a clutch does not act, due to slip, a small dose of water puts matters right at once if the mechanical portions are in order. 1904 RAYNOLDS *in Physical Rev.* XVIII. 423 Between the pressures of 6 and 20 millimeters of mercury the value of the coefficient of slip was found to be inversely proportional to the density of the gas and very nearly equal to the free path of the molecules. 1912 *Q. It is the difference between the speed of the revolving field and the speed of the rotor. This is technically termed the 'slip' of the motor.

f. The back-current generated by the propeller of an aeroplane.

1916 BARBER *Aeroplane Speaks* to note, As the propeller screws through the air, the latter to a certain extent gives back to the thrust of the propeller blades. Such 'give-back' is known as 'slip', and anyone behind the propeller will feel the slip as a strong draught of air.

This lead enters the tank as a bright flash, and is known as splash. It is curious that the Germans never realised the effect of splash on our crews.

The stagger is measured by the angle made by the line joining the leading edges with the normal to the fore and aft axis of the aeroplane. It is convenient to call the stagger positive if the upper wing is ahead of the lower. 1916 H. Biplanes with the upper surface set ahead of the lower, have been built to secure the supposed advantage of locating the two surfaces directly above one another, not in apparent aspect, but within the actual flow of the air streams, which approach with a rising trend. 1915 DOMMETT *Aeroplanes & Airships* 25 Biplanes are not so efficient in 'lifting' properties as monoplanes of the same wing area, owing to the wind streams being interfered with, but this defect can be reduced by 'staggering', that is, placing the upper plane slightly forward of the lower plane. 1916 H. BARBER *Aeroplanes Speaks* 63 By staggering the top surface forward... it is removed from the action of the lower surface and engages

undisturbed air. 1920 *Motor Cycle* 20 May 562/2 The side-car accommodates two passengers in staggered seats.

A similar effect was produced in the cinematograph camera when the film was run at high speed, or cranking was continued for a long period through the ribbon making frictional contact with the various pressure and other devices introduced. *Ibid.* Williamson and other pioneers did not wholly subjugate 'statics' because this phenomenon is influenced by meteorological and climatic conditions.
